

Old Windows Video Tutorial

A picture is worth a thousand words

Sometimes it is much easier to learn by watching and listening to an explanation, so Richard Bateman (the project manager) has put together a short video tutorial to help get you started.

This tutorial was created on Windows; most of the concepts are going to be the same, except for install and the compiler used. For more complete treatment of how to add methods and properties to the JSAPI object watch the last few from the [Old Mac Video Tutorial](#)
