```
FB::DOM::Window::Window ( const JSObjectPtr & element )
```

Constructor. DO NOT USE.

Instead of using this constructor, use `Window::create(FB::JSObjectPtr &api)`. This way it will create the correct type. In IE an `AXDOM::Window` object which extends this one is created to handle some special cases in ActiveX.

Parameters

element The
element.

Definition at line 25 of file `ScriptingCore/DOM/Window.cpp`.

```
25 : Node(element)  
26 {  
27 }
```

`FB::DOM::Node`

DOM Node wrapper.

Definition: `ScriptingCore/DOM/Node.h:39`
