~DefaultBrowserStreamHandler

```
bool FB::DefaultBrowserStreamHandler::onStreamDetached ( FB::DetachedEvent evt, virtual  
                                                         FB::BrowserStreamStream tu  
                                                         )
```

Called when the stream is detached from this handler (may not have been destroyed).
